

TECHNICAL INTERVIEWS

Technical Interview Questions:

Technical Interview Questions: This type of interview consists of technical questions in your field. Prepare for brainteasers or riddles designed to measure your analytical and problem-solving skills. Review specific concepts you have learned that are relevant to the position. It consists of technical questions in your field (programming, lab experiences, etc.). It can also consist of brain teasers, riddles, etc., designed to measure your analytic and problem-solving skills. You can also do informational interviews with employers and ask them how to prepare for technical interviews/their experience/sample questions..

Examples of Technical Questions

- The following script or programming code will not compile. Please explain why.
- You're asked to design a stealth attack aircraft for the US Navy. What might it look like and why?
- How would you improve this pen?
- Why are manhole covers round?
